

AIAI MASTERMIND

OPERATING MANUAL • EDITION 3

Your First AI Employee.

An executive onboarding manual for hiring, training, and dispatching your first AI Chief of Staff.

FOR

Owner-operators, \$500K to \$5M+, building portable AI infrastructure.

BUILT AROUND

Six modules. Two missions.
One operating system.

COMPANION REPO

[github.com/philgoodvibe/
your-first-ai-employee](https://github.com/philgoodvibe/your-first-ai-employee)

HOW TO USE THIS MANUAL

Read this once. Keep it open beside Claude.

This is not a worksheet. It is the operating manual for your first AI hire. Use the left page while you watch each module. Use the right page to capture what your Chief of Staff produces and what you decided.

THE SIX STATES YOU WILL SEE

Every block in this manual belongs to one of these six surfaces. Learn them once. The rest of the manual is faster.

 WATCH Open the module video. Follow what the screen does.	 DO You are in Claude or your folder right now. Action lives here.	 CHECK Move on once these are true. The exit gate for the section.	 IF STUCK A failure mode and the recovery script. Use the script verbatim.	 ASK YOUR AI Paste this into Claude. Brief the employee, do not chase prompts.	 IF CURIOUS Optional context. Take it only if you want to dig deeper.
--	--	--	--	--	---

THE COURSE MAP

Six core modules + one bonus. Each ends with something locked you can use.

MODULE 1 Hire Named AI Chief of Staff who confirms the role.	MODULE 2 Office One working folder where all work lives.	MODULE 3 Onboard Business context and standing operating docs.	MODULE 4 Train The course skill installed and verified.	MODULE 5 Mission 1 Social and SEO Strategy Plan, locked.	MODULE 6 Mission 2 AI Employee Roadmap for the next 90 days.	MODULE 7 · BONUS Power-ups One upgrade wired in: Telegram, memory, CRM, Codex, orchestration, GSD/superpowers.
--	--	--	---	--	--	--

THE PRINCIPLE

BRIEF, DO NOT PROMPT Front-load the mission. State outcome, context, why, quality bar, guardrails, and autonomy. Then say go.	LOCK WHAT WORKS When a draft is right, lock it. Future work uses the locked version, not the latest improvisation.	BUILD PORTABLE STRUCTURE The structure travels. Claude, Codex, or whatever comes next can read your operating folder.
---	--	---

PRE-FLIGHT

Three questions, one checklist, then you start.

Do not skip this page. The questions sharpen your aim. The checklist heads off the four most expensive failures of Module 1.

SHARPEN YOUR AIM

What would make this course worth your time?

Where are you currently losing time, context, or consistency?

What should your first AI employee understand about your business before doing real work?

PRE-FLIGHT CHECKLIST

✓ DONE WHEN

- ☐ Mac or Windows machine confirmed (Linux not supported by Claude Desktop).
- ☐ Claude account on a paid tier (Code tab is Pro-only).
- ☐ GitHub account created with two-factor authentication enabled.
- ☐ On Windows: Git for Windows installed and machine restarted.
- ☐ Working folder location chosen (not iCloud Drive sync, not Dropbox).
- ☐ One uninterrupted hour held on the calendar.

⚠ HEADED OFF HERE

SYMPTOM	Plugin install seems to work but nothing happens.
CAUSE	Wrong tab. Plugins live in the Code tab, not Chat.
FIX	Switch to the Code tab in Claude Desktop. Re-install.

📄 ASK YOUR AI BEFORE YOU START

If anything in the checklist is unclear, paste this into Claude.

I am about to start the Your First AI Employee course. Walk me through how to confirm I have: a paid Claude tier, GitHub two-factor authentication, and Git installed if I am on Windows. Ask one question at a time. Do not assume. If something looks wrong, name what is wrong and how to fix it.

MODULE

1

Hire your first AI employee.

By the end of this module, your AI Chief of Staff has a name, a confirmed role, and is connected to GitHub so it can fetch the course library.

▶ **WATCH FIRST** **Module 1 video** · ~3 min · "Hire"

DO THIS IN CLAUDE

1. Open Claude Desktop. Switch to the **Code** tab. Confirm the work surface is visible.
2. Connect GitHub. Approve the connector when prompted.
3. Tell Claude what you want to call your Chief of Staff.
4. Confirm the role. Wait for the employee to acknowledge in its own words.

IF STUCK

CODE TAB MISSING You are on the free tier. Upgrade or use Pro for the course.

WINDOWS FAILS Install Git for Windows from git-scm.com, then restart Claude.

MAC ASKS FOR FOLDER ACCESS Click Allow. macOS asks once per folder. Deny breaks fetch silently.

ASK YOUR AI

Use this to confirm the hire is real, not just claimed.

In your own words, summarize who you are in this folder, what role I just hired you for, what you have access to, and one thing you would need from me before doing real work.

CAPTURE: CHIEF OF STAFF IDENTITY

Chief of Staff name

Your name

Business name

Business type

Revenue band

Team size

What you want this Chief of Staff to own first

DONE WHEN

- ☐ Claude Desktop open on the Code tab.
- ☐ GitHub connected and authorized.
- ☐ Chief of Staff is named.
- ☐ Chief of Staff has confirmed the role in its own words.
- ☐ You can describe what you want it to own first.

Hire Your First AI Employee

Folder → Code → Hire → GitHub. One milestone: Riley confirms the role.

MODULE 1 · HIRE

MODULE MAP

YOU START WITH

An empty Mac or Windows machine. No Claude folder, no employee, no operating context.

YOU FINISH WITH

A working folder named after your AI Chief of Staff, opened in Claude Code, with GitHub connected.

MILESTONE

Your employee replies to the hiring message in its own words and confirms the role.

HOW TO WORK THIS MODULE WITH YOUR CHIEF OF STAFF

- › Read the goal above. That is the only thing this module is trying to deliver.
- › The prompts below are examples, not magic. Once you understand the goal, you can brief your employee in your own words.
- › If something looks off, jump to the **If Stuck** card for that step. Do not run the main-path prompt again hoping for a different answer.

GOAL

Hire your AI Chief of Staff by creating its working folder, opening that folder in Claude Code, sending a hiring message it can confirm, then connecting GitHub so the next module can fetch templates.

BEFORE YOU START

You need:

- Claude Desktop account with access to the Code work surface (paid plan)
- Mac or Windows computer
- Email you can check
- GitHub account, or time to create one

If you are on Windows, install Git for Windows before you start:

<https://git-scm.com/downloads/win>

Restart Claude Desktop after installing it. The Code work surface can fail quietly on Windows if Git is missing.

GitHub may ask for two-factor authentication. This is normal. Save your recovery codes somewhere safe before moving on.

STEP 1: INSTALL OR OPEN CLAUDE DESKTOP

Go to the Claude download page. Download the app for your operating system.

- **Mac:** drag Claude into Applications and open it.
- **Windows:** run the installer and open Claude.

Sign in with your Claude account.

Checkpoint:

- Claude Desktop opens.
- You are signed in.
- You can see the main app window with Chat, Cowork, and Code at the top.

IF STUCK first-open warning

If your computer warns you about opening the app, treat it as a normal first-open warning. On Mac, click Open. On Windows, use the consumer installer from Claude's download page, not an enterprise .msix package.

Figure: The three work surfaces: Chat, Cowork, Code

STEP 2: CREATE THE WORKING FOLDER ON YOUR COMPUTER

This is where your employee will live. Pick a name that sounds like a real person you would hire. Examples: Chief of Staff Riley, Operations Lead Morgan, Marketing Lead Casey.

- **Mac:** open Finder. Choose a location you can find again (Documents, Desktop, or your iCloud Drive). Right-click → New Folder. Name it `Chief of Staff [NAME]`.
- **Windows:** open File Explorer. Right-click → New → Folder. Name it `Chief of Staff [NAME]`.

Do not put it inside another project folder. This folder is the employee's home.

Checkpoint:

- The folder exists at a location you can re-open from memory.

- The folder name uses a real first name. No "test" or "temp" names.

IF STUCK folder picker can't see it

Some cloud-sync tools hide folders that are still syncing. If Claude's folder picker in Step 3 cannot see the folder you just made, restart Claude Desktop and try again. If you are using Google Drive or OneDrive, wait until the cloud icon next to the folder shows it is fully synced before continuing.

STEP 3: OPEN THE FOLDER IN CLAUDE CODE

Now bring the folder into Claude.

- › In Claude Desktop, click **Code** at the top of the window. (Not Chat. Not Cowork.)
- › When Code opens, choose **Open Folder** (or **Choose a folder**).
- › Navigate to the folder you created in Step 2 and open it.

You should now see the folder name as a small badge or label at the top of the chat input. The folder is empty. That is correct.

Checkpoint:

- Code is the active work surface.
- The folder badge shows your `Chief of Staff [NAME]` folder.
- The chat input is empty and waiting.

IF STUCK Code is not visible or is locked

If you do not see Code, your Claude account may not have access yet. Upgrade to a paid plan that includes Code. This course depends on the local work surface — Cowork and Chat will not produce the same outcome.

>

If you are on a work laptop and Cowork is blocked by your IT team, do not stop. Cowork sometimes needs admin rights, but Code is a different surface and is usually fine.

Figure: Code work surface — folder picker open

Figure: Empty Chief of Staff Riley folder linked in Code

STEP 4: SEND THE HIRING MESSAGE

In the same Code session — with the employee's folder linked — type your hiring message in your own words.

Main path — example wording:

ASK YOUR AI

I am hiring you as my AI Chief of Staff. I will call you [NAME]. Your job is to help me run [BUSINESS] by understanding our context, organizing information, preparing strategy, and helping me brief future AI employees. Confirm that you understand the role.

Replace [NAME] and [BUSINESS] with your real values.

You are not looking for a perfect answer. You are looking for a confirmation that the role landed — written in the employee's own words, not a copy of your message.

Checkpoint (this is the module milestone):

- The employee replies with a confirmation in its own words.
- It refers to itself by the name you gave it.
- It refers to your business by name.
- It restates the role at least once without being asked.

IF STUCK the reply sounds generic

If the reply does not use the name and business, the folder may not be linked, or the message may have been sent in Chat instead of Code. Look for the folder badge above the input. If it is missing, restart at Step 3. Do not send a second hiring message — start a fresh chat in the same folder.

Figure: Hiring message typed inside the linked folder

Figure: Riley confirms the role in its own words — module milestone

STEP 5: SET UP GITHUB (FIRST-TIME USERS)

If you already have a GitHub account with two-factor authentication on, skip ahead to **Step 6**.

If GitHub is new for you, this is the part that catches people. It is also a one-time setup. Do it now and you never think about it again.

5a. Create the account

Go to github.com/signup and create an account. Use the email you actually check. The username does not need to match your business name — your Chief of Staff will not use it for anything visible to customers.

5b. Turn on two-factor authentication

GitHub will walk you through this on the first sign-in. The shortest path is the **authenticator app** option (Google Authenticator, 1Password, Authy, or Apple Passwords).

When you see the QR code, open your authenticator app, scan it, and type in the 6-digit code GitHub asks for.

5c. Save your recovery codes

After 2FA is set up, GitHub will show you a list of one-time **recovery codes**. Save them somewhere safe — a password manager is best. If you lose your phone, these are how you get back in.

Do not skip this. People lose hours here later because they did not save these the first time.

A screenshot of a web browser showing the GitHub sign-up page. The browser's address bar displays "https://github.com/signup". The page features the GitHub logo at the top, followed by the heading "Sign up to GitHub". Below this, there are four input fields: "Email" (containing "you@example.com"), "Password", "Username", and "Country/Region" (a dropdown menu with "Select a country/region" selected). A green "Continue" button is positioned below the "Country/Region" field. At the bottom, there is a link that says "Already have an account? [Sign in.](#)".

Figure: GitHub signup page at github.com/signup

A screenshot of the GitHub two-factor authentication setup page. The browser's address bar shows "github.com/settings/two_factor_authentication/setup/entry". The page has a dark header with navigation links: "Product", "Solutions", "Open Source", and "Pricing". On the right side of the header, there are links for "Sign in" and "Sign up". The main content area is titled "Set up authenticator app". Below the title, there is a paragraph explaining that authenticator apps generate one-time passwords. A QR code is displayed in the center. Below the QR code, there is a link that says "Couldn't scan? Manually [enter the secret](#) instead." Below this, there is a section titled "Verify the code from the app" with an input field containing the number "123456" and a green "Continue" button.

Figure: GitHub two-factor authentication QR code — scan with your authenticator app

Figure: GitHub recovery codes — save these in a password manager before continuing

STEP 6: CONNECT GITHUB TO CLAUDE

Now connect the GitHub account you just set up to Claude so the next module can fetch course templates.

- › Open Claude Desktop **Settings**.
- › Find **Connectors**.
- › Choose **GitHub**.
- › Sign in.
- › Authorize access to public repositories.

GitHub is where your Chief of Staff will fetch course templates in Module 2.

Checkpoint:

- The GitHub connector shows a connected status.
- You did not have to enter a password again.

IF STUCK GitHub verification email is missing

Check Promotions, Spam, Junk, and any company email filters before requesting a new code. If GitHub gives you a visual puzzle, slow down. Do not keep guessing quickly. The puzzle gets stricter after repeated failed attempts.

>

If you clicked away from a permission or authorization screen mid-flow, return to Settings → Connectors → GitHub and start the connection again.

Figure: Settings → Connectors → GitHub showing Connected

IF YOUR SCREEN LOOKS DIFFERENT

Do not guess. Tell your Chief of Staff:

IF STUCK — PASTE THIS

My screen looks different from the walkthrough. Ask me one question at a time and help me find the Code work surface and GitHub connector.

RESOURCEFULNESS PROMPT

Use this when you are stuck and you do not know which issue you have:

IF STUCK — PASTE THIS

I am in Module 1. I created a working folder, opened it in Code, sent a hiring message, and tried to connect GitHub. Here is what I see on my screen: [describe it]. Diagnose the most likely cause. Ask me one question at a time. Do not move forward until we have confirmed the next click.

Good help from your Chief of Staff should feel like a calm technician, not a lecture. If it gives you a wall of steps, say:

IF STUCK — PASTE THIS

That is too many steps at once. Give me only the next action, then wait for my result.

COMMON FAILURE POINTS

- Folder was created but never opened in Code. The hiring message was sent in plain Chat and got a generic reply.
- The folder badge is missing above the chat input. The employee has no home and replies as a stranger.
- Claude account is on a free plan and Code is blocked. Upgrade before continuing.

- Windows is missing Git for Windows. Install it and restart Claude.
- GitHub verification email is in Promotions, Spam, or Junk.
- Two-factor recovery codes were not saved before continuing.
- Walked away mid-authorization on GitHub. Restart from Settings → Connectors.

DONE CHECKLIST

- ☐ Claude Desktop installed and signed in
- ☐ Working folder created on disk with employee's name
- ☐ Folder opened in Claude Code (folder badge visible)
- ☐ Hiring message sent inside that folder
- ☐ Employee confirmed the role in its own words
- ☐ GitHub account created with 2FA on (or already had one)
- ☐ Recovery codes saved somewhere safe
- ☐ GitHub connected to Claude

NEXT

You hired the employee and you have a folder it can call home. Module 2 sets up that office with the templates the employee will use to do real work.

MODULE

2

Set up the office.

By the end of this module, your AI employee has one working folder where every artifact lives. The structure is portable: it survives tool changes.

▶ WATCH FIRST Module 2 video · ~3 min · "Office"

🔒 DO THIS

1. Pick a folder location that is not auto-syncing (no iCloud Drive, no Dropbox active sync).
2. Create the working folder. Name it **your-first-ai-employee**.
3. Open the folder in Claude's Code tab. Approve folder access.
4. Ask your Chief of Staff to copy the course library into the folder.
5. Verify the folder tree matches the diagram on the right.

Folder structure (target)

```
your-first-ai-employee/
├── CLAUDE.md
├── AGENTS.md
├── context-folder/
│   └── 00-business-overview.md
├── skill/
├── templates/
├── references/
├── troubleshooting/
├── 01-social-seo-strategy/
└── 02-ai-employee-roadmap/
```

⚠️ IF STUCK

SYNC CORRUPTS FILES Move folder out of iCloud Drive, Dropbox, or OneDrive. Then re-fetch.

MAC BLOCKS ACCESS System Settings > Privacy & Security > Full Disk Access > toggle Claude on. Restart.

PERMISSION DENIED Click Allow on every command Claude requests during the fetch. Deny breaks the flow.

CAPTURE: WORKING FOLDER

Absolute folder path

Where it lives (Desktop, Documents, custom)

Sync exclusions confirmed

🗉 ASK YOUR AI

List the contents of the working folder. Confirm whether each file from the target folder structure is present, missing, or extra. If anything is missing, propose how to fetch it. Do not invent files.

DONE WHEN

- ☐ Working folder exists at a stable path.
- ☐ Folder is open in Claude's Code tab.
- ☐ File access is approved.
- ☐ Course library copied into the folder.
- ☐ Folder tree matches the diagram.

Set Up The Office

Have your Chief of Staff fill the folder you already created with the course library.

MODULE 2 · SET UP THE OFFICE

MODULE MAP

YOU START WITH

The folder you created in Module 1, linked to Claude Code, with a confirmed Chief of Staff and GitHub connected.

YOU FINISH WITH

The same folder, now filled with the course library: README, skill, templates, references, troubleshooting.

MILESTONE

Your employee lists what it copied, with the exact path. You re-open the folder and see the same structure.

HOW TO WORK THIS MODULE WITH YOUR CHIEF OF STAFF

The folder already exists from Module 1. The employee already lives there. Module 2 is one job: have your Chief of Staff fetch the course library from GitHub and drop it into your folder.

Do not create a new folder. Do not switch work surfaces. Stay in the Code session you opened in Module 1.

GOAL

Have your Chief of Staff fetch the course materials from GitHub and copy them into the working folder you created in Module 1, so the rest of the course has skill, templates, and references to pull from.

BEFORE YOU START

Confirm Module 1 actually finished:

- ☐ You created a folder named after your AI Chief of Staff (Module 1, Step 2).
- ☐ You opened that folder in Claude Code and the folder badge is visible above the chat input (Module 1, Step 3).
- ☐ Your employee replied to the hiring message in its own words (Module 1, Step 4).
- ☐ GitHub is connected in Settings → Connectors (Module 1, Step 5).

If any of those is missing, go back to Module 1 before continuing. Module 2 will fail in confusing ways otherwise.

STEP 1: PICK UP WHERE MODULE 1 LEFT OFF

Open Claude Desktop. Click **Code**. The folder you created in Module 1 should already be open in your most recent session — look for the folder badge above the chat input.

If the session has expired or you closed the window:

- › Click **Code**.
- › Choose **Open Folder**.
- › Navigate to the folder you created in Module 1 and re-open it.
- › Send a one-line "you're back, ready for Module 2?" message and confirm your employee remembers who it is and what we did in Module 1.

IF STUCK the employee does not remember Module 1

The folder badge is probably missing. You opened a fresh chat without linking the folder. Re-open the folder via **Open Folder** and send a brief recap: "We finished Module 1: you are [NAME], my Chief of Staff for [BUSINESS]. We are now starting Module 2." If it still feels generic, the wrong folder is open.

STEP 2: GRANT FILE ACCESS IF ASKED

When you start work in this folder, Claude may ask permission to read and write files. Allow it.

You are approving this specific working folder, not giving Claude unlimited access to your computer.

IF STUCK you clicked Deny by mistake

Tell your Chief of Staff: "I may have denied file access by mistake. Help me check whether you can read and write inside my working folder. Ask me one step at a time." On Mac, you may need System Settings → Privacy & Security → Full Disk Access → allow Claude, then restart Claude.

Checkpoint:

- Claude can read the folder you opened in Module 1.
- Claude can write a small test file when asked.
- You know the exact path of the folder.

STEP 3: BOOTSTRAP THE COURSE MATERIALS

Ask your Chief of Staff to fetch the course library from GitHub.

ASK YOUR AI

Use the GitHub connector to fetch the course materials for Your First AI Employee from `github.com/philgoodvibe/your-first-ai-employee`. Copy the README, skill, templates, references, and troubleshooting folders into this working folder. When you are done, list what you copied and the full path you copied it to.

This is an example. If your Chief of Staff asks where the repo is, point it to the course repo your program provides.

If Claude asks permission to run a fetch, copy, or file command during this setup, click **Allow**. You are approving this specific setup work, not giving unlimited access forever.

IF STUCK the fetch keeps asking for permission for every file

Tell your employee: "Use your judgment and complete the bootstrap. Bring me the final file list when the folder is ready." Approval-storms are the most common Module 2 stall.

If Curious — what each piece does.

The skill is the operating playbook the employee reads on every mission. Templates are pre-written

briefs you fill in. References are working examples. Troubleshooting is the recovery guide. The context-folder is where you'll drop your business material in Module 3 (it stays empty for now).

Do not ask the employee to hand-edit technical config files. If it suggests editing `claude_desktop_config.json`, stop and ask for the safer course path.

Figure: Course library repo on GitHub before fetch

Figure: GitHub fetch prompt typed in Code

STEP 4: VERIFY THE FOLDER TREE

Open the folder on your computer (Finder on Mac, File Explorer on Windows).

You should see:

- README.md
- a skill folder
- a templates folder
- a references folder
- a troubleshooting folder

The context-folder does **not** exist yet. You'll create that in Module 3 when you drop in your business material.

Now have your Chief of Staff confirm the same view:

ASK YOUR AI

List the exact files and folders you copied into my working folder.
Also tell me the full folder path you copied them into.

Compare that path to the folder you created in Module 1. If the paths do not match, **do not continue** until the materials are in the right folder. The most common defect is a fetch that succeeded but landed in a different folder.

IF STUCK Claude says it finished but you cannot see the files

"Do not summarize. Show me the exact path where you wrote the files and the exact file list at that location." If the path it shows does not match your Module 1 folder, the fetch went somewhere else. Restart Step 3 with explicit instructions to copy into the folder it currently has open.

Use the GitHub connector to fetch the course materials for Your First AI Employee from github.com/philgoodvibe/your-first-ai-employee. Copy the skill, templates, references, troubleshooting, and context-folder structure into this working folder. When you are done, list what you copied.

Ran 5 commands >

Done. Cloned `philgoodvibe/your-first-ai-employee` (default branch `main`) and copied everything into this working folder.

Copied:

- `README.md`
- `skill/`
 - `your-first-ai-employee.skill.md`
- `templates/`
 - `AGENTS.md`
 - `CLAUDE.md`
 - `mission-1-social-seo-strategy-brief.md`
 - `mission-2-ai-employee-roadmap-brief.md`
- `context-folder/`
 - `00-business-overview.md`
 - `10-brand-voice/README.md`
 - `20-products-services/README.md`
 - `30-customers/README.md`
 - `40-past-content/README.md`
- `references/`
 - `cli-vs-desktop-vs-ide.md`
- `troubleshooting/`
 - `common-gotchas.md`

The temp clone was removed. Want me to start populating the `context-folder/` for Done For You Insurance Services next?

Figure: Riley reports what it copied — module milestone

Figure: Working folder after the GitHub clone — README + skill + templates + references + troubleshooting

RESOURCEFULNESS PROMPT

Use this if the fetch or file access step does not work:

IF STUCK — PASTE THIS

I am in Module 2. I am trying to copy the course materials into the folder we created in Module 1. My operating system is [Mac or Windows]. The folder path is [paste path]. Here is what happened:

[describe result]. Diagnose whether this is a folder-path issue, a permission issue, a GitHub connector issue, or a cloud-sync issue. Ask me one question at a time and have me verify each step.

COMMON FAILURE POINTS

- The folder is in a cloud-only location (iCloud Drive, OneDrive) and files are not actually downloaded.
- Claude opened a different folder than the one you created in Module 1.
- A permission prompt was denied by mistake in Step 2.
- The GitHub connector fetched files into the wrong place.
- The repo URL was typed or pasted incorrectly.
- Windows Defender or company security is blocking writes to the folder.

DONE CHECKLIST

- ☐ Module 1 folder still open in Code with the folder badge visible
- ☐ File access granted to the folder
- ☐ Course materials copied (README, skill, templates, references, troubleshooting)
- ☐ Folder tree verified on disk and confirmed by your Chief of Staff
- ☐ Path on disk matches the path your employee reports

NEXT

You built the office. Module 3 fills the context-folder with your business material so your Chief of Staff knows who you are and what you sell.

AIAI MASTERMIND · YOUR FIRST AI EMPLOYEE · OPERATING WALKTHROUGH

aiaimastermind.com · github.com/philgoodvibe/your-first-ai-employee

MODULE

3

Onboard the employee.

Give your AI Chief of Staff enough business context to produce specific, useful work. Drop raw material in. The employee organizes it. You review and lock.

▶ WATCH FIRST

Module 3 video · ~4 min · "Onboard"

🔒 DO THIS

1. Drop raw business material into context-folder/. No structure required. Useful context beats perfect organization.
2. Brief your Chief of Staff to study the material and draft three operating documents: a business overview, standing instructions, and an AI org chart.
3. Review the drafts. Correct facts first. Then voice. Then formatting.
4. Lock the documents.
5. Run the new-chat test. Open a new chat in the same folder and confirm the employee can describe the business without prompting.

Material your Chief of Staff can use

- ☐ Website pages, sales pages, offer descriptions.
- ☐ Customer FAQs, testimonials, sales-call notes.
- ☐ Past social posts, newsletters, webinar notes.
- ☐ Voice memos, brand guides, SOPs.

Aim for 3 to 5 website pages, 3 to 5 examples of past content, one offer description, three customer questions or objections. Do not over-polish.

🗉 ASK YOUR AI · THE ONBOARDING BRIEF

I dropped business material into context-folder/. Study it like a new Chief of Staff. Draft three documents: a business overview, standing instructions for how you work with me, and an AI org chart for future roles you can coordinate. If you need one or two answers that would change the work, ask. Otherwise, make labeled assumptions and prepare the drafts.

CAPTURE: BUSINESS CONTEXT INVENTORY

Check what you dropped into the context folder.

- ☐ Website pages
- ☐ Sales pages
- ☐ Offer descriptions
- ☐ Customer FAQs
- ☐ Testimonials
- ☐ Past social posts
- ☐ Newsletters
- ☐ Webinar notes
- ☐ Sales call notes
- ☐ Voice memos
- ☐ Brand guide
- ☐ SOPs
- ☐ Other: _____

⚠️ IF STUCK

**READS
GENERIC**

Context is too thin. Add real customer language and revise.

**INVENTED
FACTS**

Tell the employee to separate supported claims from assumed ones, and remove unsupported claims.

**NEW CHAT
BLANK**

Files not in working folder. Confirm CLAUDE.md, AGENTS.md, and 00-business-overview.md paths.

MODULE 3 CONTINUED

Review the drafts. Lock what is right.

Each output below is what your Chief of Staff produced. Mark the box on the left when you have read it, corrected facts, and locked it as the standing reference.

Capture the corrections you actually made.

☐**OUTPUT 1 · BUSINESS OVERVIEW**

Approved when offer, audience, voice, and facts are accurate.

What I corrected:

☐**OUTPUT 2 · STANDING INSTRUCTIONS**

Approved when working style, guardrails, review, and voice rules are clear.

What I corrected:

☐**OUTPUT 3 · AI ORG CHART**

Approved when roles make sense, names are clear, and Chief of Staff can coordinate them.

What I corrected:

LOCK CHECK**✓ DONE WHEN**

- ☐ CLAUDE.md reviewed and locked.
- ☐ AGENTS.md reviewed and locked.
- ☐ context-folder/00-business-overview.md locked.
- ☐ AI org chart file locked.
- ☐ New-chat test passed: a fresh chat in the same folder describes your business in voice without prompting.

ASK YOUR AI (LOCK)

This version is locked. Treat these documents as ground truth going forward. Update the working folder so future work uses this version.

ASK YOUR AI (NEW-CHAT TEST)

Without me telling you anything new, describe my business in three sentences and list the AI roles available from the org chart.

What you noticed about your Chief of Staff

What is it good at. What it over-polishes. What it tends to invent.

Onboard The Employee

Drop business material into the context folder. Review what the employee drafts. Lock what is right.

MODULE 3 · ONBOARD

MODULE MAP

YOU START WITH

An employee that knows the course but does not know your business.

YOU FINISH WITH

A locked CLAUDE.md / AGENTS.md / business overview that captures who you are, what you sell, and how you sell it.

MILESTONE

A new chat in the same folder describes your business correctly without you re-explaining it.

HOW TO WORK THIS MODULE WITH YOUR CHIEF OF STAFF

- › The deliverable is grounded context, not polished copy. Drop raw material first; let the employee organize and draft.
- › Review for facts before you review for voice. Lock only after both pass.
- › The new-chat test is the real proof. If a fresh session in the same folder cannot describe your business, the context did not stick.

GOAL

Give your AI Chief of Staff enough business context to produce useful, specific work.

STEP 1: GATHER RAW BUSINESS MATERIAL

Good context includes:

- Website pages
- Sales pages
- Offer descriptions
- Customer FAQs
- Testimonials
- Past social posts
- Newsletters
- Webinar notes
- Sales call notes
- Voice memos
- Brand guides

- SOPs

Do not over-polish. Your Chief of Staff can organize raw material.

STEP 2: DROP MATERIAL INTO THE CONTEXT FOLDER

The `context-folder/` does not exist yet. Module 2's GitHub clone deliberately left it out so it stays empty until you have business material to drop in.

Have your Chief of Staff create it for you:

ASK YOUR AI

Create a `context-folder/` at the root of this working folder. Inside, make four sub-folders: `marketing/`, `customers/`, `offers/`, and `brand/`. Confirm the folder tree when you are done.

Then open:

```
context-folder/
```

Drop your materials into the most obvious sub-folder.

If you are not sure where something belongs, put it in the context folder anyway. Useful context beats perfect organization.

Do not stop because the folder feels messy. Your job is to give the employee raw material. Its job is to organize it.

Good enough for the first pass:

- 3 to 5 pages from your website
- 3 to 5 examples of past content or emails
- 1 offer description
- 3 customer questions or objections
- Any voice or brand notes you already have

✓	Chief of Staff Riley	--	Folder	Today at 9:38 AM
>	Done For You Insurance	--	Folder	Today at 10:26 AM
	README.md	3 KB	Markdo...ument	Today at 10:24 AM
>	troubleshooting	--	Folder	Today at 10:24 AM
>	references	--	Folder	Today at 10:24 AM
>	templates	--	Folder	Today at 10:24 AM
>	skill	--	Folder	Today at 10:24 AM

Figure: Real business material dropped into the context folder (real screen)

STEP 3: ASK YOUR CHIEF OF STAFF TO STUDY THE BUSINESS

Use a brief like this:

ASK YOUR AI

I dropped business material into the context folder. Study it like a new Chief of Staff. Then draft the three operating documents this business needs: a business

overview, standing instructions for how you should work with me, and an AI org chart for the future roles you can coordinate. If you need one or two important clarifying answers, ask. Otherwise, make reasonable assumptions, label them, and prepare the drafts.

This is an example, not a magic prompt. Use your own words if they are clearer.

If your Chief of Staff asks for a long list of clarifying answers, do not answer all of them by default. Answer the few that materially change the work, then tell it to make labeled assumptions.

Figure: Onboarding prompt typed in Code (real screen)

I dropped business material into the context folder. Study it like a new Chief of Staff. Then draft the three operating documents this business needs: a business overview, standing instructions for how you should work with me, and an AI org chart for the future roles you can coordinate. If you need one or two important clarifying answers, ask. Otherwise, make reasonable assumptions, label them, and prepare the drafts.

Ran 2 commands, read a file ›

Found the material — it's in `Done For You Insurance/` at the root. Reading now.

Ran 3 commands, read a file ›

Studied the material in `Done For You Insurance/` — brand kit, ecosystem alignment guide, and Lovable site prompt. Got a strong picture. One clarifying question before I finalize, then drafts below.

One clarifying question

The brand kit mentions my company is a "digital agency," but I'm not sure what that means in the context of your business. Can you clarify what "digital agency" means for you? I'll use that to inform the drafts.

I went ahead and produced the three drafts so you have something concrete to react to.

Ran a command, created 3 files ›

Three drafts produced and saved.

What I drafted

File	Purpose
<code>context-folder/00-business-overview.md</code>	Canonical "About DFY" — what we do, who we serve, products, principles, anti-positioning, 12-month goals, gaps Riley still needs filled
<code>CLAUDE.md</code>	Standing instructions for how I work with you, MJ, and clients — voice rules, decision rights, banned words, compliance posture, file conventions

Figure: Riley shows what it discovered — file paths visible (real screen)

STEP 4: REVIEW THE DRAFTS

Check three things:

- › Facts: Is it accurate?
- › Voice: Does it sound like you?
- › Operating style: Would this help future work?

If something is wrong, correct it directly.

Example:

ASK YOUR AI

You said [wrong thing]. The correct version is [truth]. Rewrite the document with that correction.

Do not correct style before correcting truth. First fix facts. Then fix voice. Then fix formatting.

STEP 5: LOCK THE DOCUMENTS

When the drafts are right, say:

ASK YOUR AI

This version is locked. Treat these documents as ground truth going forward. Update the working folder so future work uses this version.

Figure: CLAUDE.md after lock — durable operating doc (real screen)

Figure: New chat in the same folder, lock survives a session reset — module milestone (real screen)

STEP 6: RUN THE NEW-CHAT TEST

Open a new chat in the same working folder.

Ask:

ASK YOUR AI

Without me telling you anything new, describe my business in three sentences and list the AI roles available from the org chart.

If the new chat cannot see the documents, ask it to inspect the working folder and confirm the paths for:

- CLAUDE.md
- AGENTS.md
- context-folder/00-business-overview.md
- the AI org chart file

IF IT SOUNDS GENERIC

The context is probably too thin.

Add:

- More past writing
- More customer language
- More sales material
- Voice memos
- Specific examples of what you would and would not say

Then ask the Chief of Staff to revise.

RESOURCEFULNESS PROMPT

Use this when the employee sounds generic, invents facts, or fails the new-chat test:

IF STUCK — PASTE THIS

I am in Module 3. I am onboarding you with business context. Here is the problem: [generic output, invented fact, or new-chat failure]. Diagnose whether this is a thin-context issue, wrong-file-location issue, instruction-file issue, or assumption issue. Ask me one question at a time. Do not rewrite until we know the likely cause.

If it invents facts, say:

IF STUCK – PASTE THIS

Separate what is supported by the context folder from what you assumed. Remove unsupported claims from the locked documents unless I confirm them.

COMMON FAILURE POINTS

- The context folder has too little real customer language.
- The employee writes polished but generic business copy.
- It invents facts because it is trying to be helpful.
- `CLAUDE.md` and `AGENTS.md` are not in the right place.
- The new chat is not opened in the same working folder.
- You locked documents before reviewing them for accuracy.

DONE CHECKLIST

- ☐ Context folder populated
- ☐ Business overview drafted
- ☐ Standing instructions drafted
- ☐ AI org chart drafted
- ☐ Drafts reviewed
- ☐ Drafts locked
- ☐ New-chat test passed

NEXT

Your Chief of Staff knows the business. Module 4 trains the employee with reusable work habits.

AIAI MASTERMIND · YOUR FIRST AI EMPLOYEE · OPERATING WALKTHROUGH

aiaimastermind.com · github.com/philgoodvibe/your-first-ai-employee

MODULE

4

Train the employee.

Install the course skill. The skill is the reusable working pattern your Chief of Staff applies to every mission. Trainable assets compound; one-shot prompts do not.

▶ WATCH FIRST

Module 4 video · ~3 min · "Train"

- 🔒 DO THIS
1.

In Claude's Code tab, open the working folder.
2.

Confirm the skill/your-first-ai-employee.skill.md file is present.
3.

Ask your Chief of Staff to install or confirm the skill.
4.

Run the verification prompt below on a real piece of your business.
5.

Capture the proof on the right. If it does not pass, repeat the install.

🗉 ASK YOUR AI (VERIFICATION)

Demonstrate the Your First AI Employee skill on a real piece of my business. Pick something concrete from the context folder, apply the skill's working pattern, and show me the steps you took. If the skill is not installed or not visible to you, say so plainly and tell me what is missing.

⚠️ IF STUCK

SKILL NOT FOUND

Re-fetch the course library. The skill file lives in skill/.

INSTALL FAKES SUCCESS

You are in the wrong tab. Plugins live in the Code tab, not Chat.

CAPTURE: TRAINING PROOF

TRAINING ASSET	WHAT IT DOES	PROOF IT WORKS
Course skill your-first-ai-employee.skill.md	Gives the Chief of Staff a reusable working pattern for missions.	Verification ran on a real business example.

Verification notes

Future training wish list

What you want this Chief of Staff to learn next. Be concrete (a brand voice reference, a CRM data export pattern, a sales-call summary format).

- DONE WHEN
- ☐

Skill file present in the working folder.
- ☐

Chief of Staff confirms the skill is installed.
- ☐

Verification ran against real business material.
- ☐

You have noted what to train next.

Train The Employee

Verify that your Chief of Staff can use the Your First AI Employee course skill.

MODULE 4 · TRAIN

MODULE MAP

YOU START WITH

An onboarded employee with no specific work habits yet.

YOU FINISH WITH

The same employee, now able to use the course skill — navigates missions, briefs itself, answers consistently.

MILESTONE

Your employee shows evidence the course skill is active and explains how it will use it next.

HOW TO WORK THIS MODULE WITH YOUR CHIEF OF STAFF

- › The skill file is already in your folder. Nothing new to add.
- › Your job is to make sure your employee is reading it.
- › Don't accept "I'm using the skill." Ask for a quote.

GOAL

Confirm your Chief of Staff is reading the course skill at `skill/your-first-ai-employee.skill.md` and can apply it to your next mission.

STEP 1: CONFIRM THE SKILL FILE IS THERE

Stay in the same Code session you have been using since Module 1. The folder badge above the chat input should still show your Chief of Staff folder.

ASK YOUR AI

Confirm the file `skill/your-first-ai-employee.skill.md` exists in this folder. Quote one sentence from it and tell me what the skill is for in your own words.

Checkpoint:

- It returns a real quote from the file.
- It explains the skill's purpose in plain language.
- The folder path it reports matches your Module 1 folder.

IF STUCK it cannot find the file

Ask: "What absolute folder path are you looking in, and what files do you see at the top level?" If the path is not your Module 1 folder, you are in a different Code session. Re-open the correct folder via Open Folder and try again.

STEP 2: USE THE SKILL ON A REAL TASK

Now make Riley use what it just read.

ASK YOUR AI

Using the course skill, prepare me for Module 5. Give me a one-paragraph briefing pattern I can use to dispatch Mission 1, and name which template in templates/ you would start from. Quote the part of the skill you are following.

Checkpoint (this is the milestone):

- It quotes a specific line from the skill file.
- It names a specific template by filename.
- The briefing pattern it returns is short, concrete, and ready to use.

IF STUCK it summarizes the skill but does not quote it

"Quote the exact line from skill/your-first-ai-employee.skill.md that tells you how to brief a mission. Then continue." If it still cannot quote, it is not actually reading the file — return to Step 1.

STEP 3: CAPTURE WHAT YOU LEARNED

In your workbook, write down:

- The skill file path: `skill/your-first-ai-employee.skill.md`
- One short quote your employee pulled from it
- The template filename it said it would use in Module 5
- The briefing pattern it gave you, in your own words

That is the artifact you carry into Module 5.

RESOURCEFULNESS PROMPT

Use this if proof keeps coming back vague:

IF STUCK — PASTE THIS

You said you are using the course skill but I cannot see proof. Stop and read `skill/your-first-ai-employee.skill.md` in full. Then quote the section that tells you how to brief a mission, and name the template you will use in Module 5.

DONE CHECKLIST

- ☐ Skill file confirmed at ``skill/your-first-ai-employee.skill.md``
- ☐ A real quote from the skill captured
- ☐ A template named for Module 5
- ☐ A briefing pattern ready for Mission 1

NEXT

Your Chief of Staff is now ready for its first real mission. Module 5 dispatches Mission 1: a Social and SEO Strategy Plan for your business.

MISSION 1 READINESS GATE

STOP

Three answers before you brief the strategy.

The Social and SEO Strategy your Chief of Staff produces will be exactly as specific as the answers on this page. Skip the gate and you get a generic strategy that reads like every other agency deck. Spend ten honest minutes here and you get a plan worth executing.

1. Audience specificity

Who specifically is this content for. Write it clearly enough that someone in the audience would say, "that is me." Not "small business owners." Closer to "two-truck residential roofers in the upper Midwest who do their own quoting."

2. Three real customers in their own words

Pick three real customers. Write what they actually said about why they bought from you, stayed with you, or referred you. Use real quotes if you have them. Paraphrasing makes the strategy generic.

3. Content non-negotiables

Three things your content should never do. These become the guardrails the Chief of Staff uses for every piece. Examples: never use first-person plural for the brand, never publish without a named author, never claim ROI without a customer name.

✓ YOU ARE READY FOR MISSION 1 WHEN

- ☐ Audience is specific enough that someone in it would recognize themselves.
- ☐ Three real customers are captured, ideally in their own words.
- ☐ Three content non-negotiables are written.

MODULE

5

Mission 1 • Social and SEO Strategy.

Brief your Chief of Staff to produce a complete Social and SEO Strategy Plan: messaging pillars, content formats, SEO topic clusters, and a 30-day calendar. Capture how you briefed it.

[▶ WATCH FIRST](#)

Module 5 video • ~5 min • "Mission 1"

THE BRIEF YOU WROTE

Capture the brief in the six-layer pattern. This is your work, not the AI's. The brief is what makes the next page possible.

1. Outcome • what you asked for

4. Quality bar • what good looks like

2. Context • what you pointed to

5. Guardrails • what it must not do

3. Why it matters • the business reason

6. Autonomy • clarify or proceed with labeled assumptions

⚠ IF THE STRATEGY READS GENERIC

MOST LIKELY CAUSE The readiness-gate answers were too thin. Go back to page 09 and rewrite them with real customer language.

SECONDARY CAUSE The brief did not name a quality bar. The Chief of Staff defaulted to safe.

MODULE 5 CONTINUED

Capture the strategy. Approve each part.

Capture what your Chief of Staff produced for each layer of the plan. Mark the boxes when you have reviewed and approved each one. Lock the whole plan at the bottom.

☐**FIVE MESSAGING PILLARS**

1. _____
2. _____
3. _____
4. _____
5. _____

☐**RECOMMENDED CONTENT FORMATS**

☐**SEO TOPIC CLUSTERS**

☐**30-DAY CALENDAR NOTES**

Corrections you gave (the difference between a generic plan and yours)

✓ DONE WHEN

- ☐ Strategy plan reviewed end-to-end.
- ☐ Five messaging pillars approved.
- ☐ Content formats approved.
- ☐ SEO topic clusters approved.
- ☐ 30-day calendar approved.
- ☐ Plan locked.

🔒 ASK YOUR AI (LOCK THE PLAN)

This Social and SEO Strategy Plan is locked. Treat it as the standing reference for content and SEO going forward. Save it in 01-social-seo-strategy/. Use this version when planning content, briefing future content production, or proposing the next AI employees.

Mission 1 — Social and SEO Strategy

Brief your AI Chief of Staff to produce a complete Social and SEO Strategy Plan.

MODULE 5 · MISSION 1 — STRATEGY

MODULE MAP

YOU START WITH

A trained employee with locked context but no strategic deliverable yet.

YOU FINISH WITH

A locked Social and SEO Strategy folder: pillars, keywords, calendar, briefs, dashboards.

MILESTONE

You can read the messaging-pillars and 30-day calendar out loud and recognize your business in them.

HOW TO WORK THIS MODULE WITH YOUR CHIEF OF STAFF

- › This is the first real mission, so the briefing pattern matters. Front-load outcome, context, quality bar, guardrails, and autonomy. Do not micromanage.
- › Have your Chief of Staff plan first, then work. Read its plan and only then approve execution.
- › Review for fit before review for polish. If the strategy does not match your business, no amount of polish will save it.

GOAL

Brief your AI Chief of Staff on its first real mission: create a Social and SEO Strategy Plan for your business.

WHAT THE PLAN SHOULD INCLUDE

Ask for a plan that covers:

- Brand and voice observations
- Audience and buyer-intent themes
- Recommended social platforms
- Recommended content formats
- Messaging pillars
- SEO topic clusters
- 30-day social media calendar
- Sample post or video ideas
- Recommended next AI employees for content execution

OPEN YOUR WORKING FOLDER IN CLAUDE CODE

If you closed Claude Desktop after Module 4, open the same working folder before you brief Mission 1. The mission only works when the folder is linked.

In Claude Desktop, look at the **top-right corner** of the window. You will see a small box icon. Click it, then choose **Files**. From the picker, select your `Chief of Staff [NAME]` folder — the same one you have used since Module 1.

Once the folder is linked, you should see its name as a badge above the chat input. Confirm with a quick check:

ASK YOUR AI

Confirm you have my working folder open. Tell me the absolute path you are looking at and the name of the locked CLAUDE.md inside it.

If the path it reports does not match your Module 1 folder, you opened the wrong folder. Use the same top-right box → Files menu to switch.

Figure: Top-right box menu in Claude Desktop — click the box, then Files, then choose your working folder

STEP 1: FRONT-LOAD THE MISSION

Use the briefing pattern:

- › Outcome
- › Context
- › Quality bar
- › Guardrails
- › Autonomy instruction

Before you send the mission, check that your context is strong enough. If the employee only has vague business context, it will produce vague strategy.

Minimum useful context:

- Locked business overview
- Standing instructions
- Offer or service description
- Past content or sales language
- Customer questions, objections, or testimonials
- Any content non-negotiables from your workbook

STEP 2: GIVE THE MISSION

Use your own words. Here is an example:

ASK YOUR AI

I want a Social and SEO Strategy Plan for this business. Use our locked business overview, standing instructions, past content, offers, customer questions, and anything else in the context folder. I want recommendations on content formats, messaging pillars, SEO themes, and a 30-day social media calendar. The plan should be practical for our current team and should explain which future AI employees would help execute it. If you need one or two answers that would materially change the work, ask now. Otherwise, make reasonable assumptions, label them, and proceed until you have a complete draft for review.

This is not a magic prompt. It is a sample briefing.

After you send the brief, let the employee work. The exercise is not to manage every sentence. The exercise is to brief clearly, set guardrails, and let the employee return a complete draft.

Figure: Mission 1 brief typed in Code

Chief of Staff Riley / Set up AI Chief of Staff for insurance agency

I want a Social and SEO Strategy Plan for this business. Use our locked business overview, standing instructions, past content, offers, customer questions, and anything else in the context folder. I want recommendations on content formats, messaging pillars, SEO themes, and a 30-day social media calendar. The plan should be practical for our current team and should explain which future AI employees would help execute it. If you need one or two answers that would materially change the work, ask now. Otherwise, make reasonable assumptions, label them, and proceed until you have a complete draft for review.

Mission accepted. Running the skill's readiness check first.

Readiness item	Status
Who is this for?	✔ 4 niches defined in business overview; will lead with restaurants for the 30-day calendar (community fit + Vietnamese-language wedge), other 3 in support rotation
Real customer language	🟡 Partial — brand kit references 8 testimonials and 4.8★ / 25+ Google reviews; I'll use what's in the kit and flag assumptions
What content must never do	✔ Locked in <code>CLAUDE.md</code> voice rules

Proceeding with reasonable assumptions, labeled. Drafting all six files now.

Ran 2 commands, created 6 files >

Mission 1 complete. All six files drafted in `01-social-seo-strategy/`.

What's in the draft

File	Headline
<code>strategy-plan.md</code>	The play, 90-day objectives, 30-day mission, channel priority, 8 labeled assumptions, day-30 success picture
<code>messaging-pillars.md</code>	5 pillars (Independence Is Loyalty / Plain-Language Coverage / Both Sides Of The Desk / Community Inside / Done For You) with sample angles + voice notes + weekly mix
<code>content-formats.md</code>	8 formats × 5 channels, fan-out logic (1 cornerstone → ~10 derivatives), Phillip-on-camera batch model
<code>seo-tonic-</code>	5 clusters (Restaurant / Contractor / Real Estate / Personal / Vietnamese-Anchor)

Figure: Riley's comprehension summary — plan first, work second

STEP 3: HANDLE THE RESPONSE

If It Asks Too Many Questions

Answer only what matters. Then say:

OPTIONAL — PASTE THIS

Use your best judgment on the rest. Make reasonable assumptions, label them clearly, and proceed with the draft.

If It Keeps Checking In

Say:

OPTIONAL – PASTE THIS

You are checking in too much. I want you to act like my Chief of Staff. Use the context folder, fill reasonable gaps with clearly labeled assumptions, complete the draft, and bring it back when it is ready for review.

If It Just Does The Work

Let it work.

If It Starts Writing Generic Advice

Stop it early and say:

OPTIONAL – PASTE THIS

Pause. This is sounding generic. Before drafting, re-read the locked business overview, offers, past content, customer questions, and testimonials. Then name the specific audience, buying triggers, and point of view you are using.

STEP 4: REVIEW THE PLAN

Review:

- Messaging pillars: do they fit?
- Content formats: are they realistic?
- SEO themes: do they match buyer intent?
- Calendar: could your team execute this?
- Future AI employees: do they make sense?

Review it like a CEO, not an English teacher. You are looking for strategic usefulness first. Wording can be improved later.

STEP 5: CORRECT THE DRAFT

If needed, give direct feedback.

Examples — use any that match what you saw in Step 4:

OPTIONAL – PASTE THIS

The calendar is too ambitious for our team. Rebuild it for three posts per week.

OPTIONAL – PASTE THIS

The messaging pillars sound generic. Re-read our past content and make them more specific to our point of view.

OPTIONAL – PASTE THIS

The SEO topics are too broad. Focus on questions buyers would ask before purchasing from us.

STEP 6: LOCK THE PLAN

When useful, say:

ASK YOUR AI

This Social and SEO Strategy Plan is locked. Treat it as our standing content strategy until we replace it. Update the relevant operating docs so future content work uses this plan.

If the mission gets long and the employee starts forgetting earlier decisions, create a handoff before continuing:

OPTIONAL — PASTE THIS

Summarize what we have decided so far in 10 bullets. Include the strategy sections completed, open decisions, assumptions, and what still needs review. Save it as mission-1-handoff.md in the mission folder.

Then start a fresh chat in the same working folder:

OPTIONAL — PASTE THIS

We are continuing Mission 1. Read mission-1-handoff.md and continue from where we left off. Do not redo completed work.

EXPECTED FOLDER

```
01-social-seo-strategy/  
├── social-seo-strategy-plan.md  
├── messaging-pillars.md  
├── seo-topic-clusters.md  
├── 30-day-social-calendar.md  
├── sample-content-ideas.md  
└── recommended-ai-content-team.md
```

Figure: Strategy folder with all six locked deliverables

- The strategy sounds like any business could use it.
- The calendar is too ambitious for the current team.
- The employee gives post ideas but not strategy.
- SEO topics are too broad and not tied to buyer intent.
- The employee keeps checking in instead of completing the draft.
- The session gets long and earlier decisions start to drift.

DONE CHECKLIST

- ☐ Mission brief given
- ☐ Draft received
- ☐ Messaging pillars reviewed
- ☐ Content formats reviewed
- ☐ SEO themes reviewed
- ☐ Calendar reviewed
- ☐ Plan corrected if needed
- ☐ Plan locked

NEXT

You have the strategy. Module 6 asks which AI employees and systems should execute it.

AIAI MASTERMIND · YOUR FIRST AI EMPLOYEE · OPERATING WALKTHROUGH

aiaimastermind.com · github.com/philgoodvibe/your-first-ai-employee

MODULE

6

Mission 2 · AI Employee Roadmap.

Brief your Chief of Staff to recommend the next AI employees, the shared memory layer, the tool stack, and a 90-day path. The locked Social and SEO Strategy is the input.

[▶ WATCH FIRST](#)

Module 6 video · ~5 min · "Mission 2"

THE BRIEF YOU WROTE

1. Outcome

4. Quality bar

2. Context

5. Guardrails

3. Why it matters

6. Autonomy

ASK YOUR AI (THE BRIEFING)

Using the locked Social and SEO Strategy in 01-social-seo-strategy/, recommend the next five AI employees this business should hire, the shared memory layer they will use, the tool stack to connect now versus defer, and a 90-day build path. For each recommendation, name the job, why now, and what it unblocks. Where the answer depends on a fact you do not have, ask one focused question.

MODULE 6 CONTINUED

The team you can build next.

Capture the recommended hires, the shared memory choice, the tool stack call, and the 90-day path. This is the locked output of Mission 2 and the first page of your forward plan.

RECOMMENDED AI EMPLOYEES

	AI EMPLOYEE	JOB IN ONE SENTENCE	WHY NOW / WHAT IT UNBLOCKS	BRIDGE
1				→
2				→
3				→
4				→
5				→

Communication and shared memory

How will these AI employees share context. What becomes the source of truth.

Tool stack: connect now

90-day path

Three milestones. What you will have at day 30, 60, 90.

Tool stack: defer

✓ DONE WHEN

- ☐ AI org chart reviewed. Next-hire priority approved.
- ☐ Communication and memory layer reviewed. Tool stack reviewed.
- ☐ 90-day path locked.

Mission 2 — AI Employee Roadmap

Brief your AI Chief of Staff to recommend the next AI employees, the shared memory layer, and a 90-day path.

MODULE 6 · MISSION 2 — ROADMAP

MODULE MAP

YOU START WITH

One AI employee doing real work, but no plan for the next ones.

YOU FINISH WITH

A roadmap of the next AI employees, the shared memory layer, and a 90-day hiring sequence.

MILESTONE

An ai-org-chart.md you would be willing to show another operator as your AI hiring plan.

HOW TO WORK THIS MODULE WITH YOUR CHIEF OF STAFF

- › Brief Mission 2 against the locked Module 5 strategy. The roadmap should serve the strategy, not start fresh.
- › Push for specificity: one named role, one tool, one starter task — not abstract org-chart aesthetics.
- › The roadmap is the bridge to Module 7. Whatever the roadmap says you need first (memory, messaging, CRM, multi-agent) is the Module 7 sub-section to start with.

GOAL

Ask your Chief of Staff to recommend the next AI employees, systems, and coordination layer your business should build.

WHAT THE ROADMAP SHOULD INCLUDE

Ask for:

- AI org chart
- Recommended next AI employees
- Role descriptions
- What each employee should do
- What tools or data each employee needs
- How the employees should coordinate
- Shared memory recommendation
- 90-day implementation path
- Next system recommendation

STEP 1: BRIEF THE MISSION

Use your own words.

Example:

ASK YOUR AI

Based on our locked business context and the Social and SEO Strategy Plan, recommend the next AI employees this business should hire. I want an org chart, role descriptions, what each employee would do, what tools or data each would need, and how they should coordinate. Include recommendations for content production, SEO research, email review, CRM review, operations coordination, and shared memory. If you need one or two answers that would materially change the recommendation, ask now. Otherwise, make reasonable assumptions, label them, and proceed until you have a roadmap I can review.

This is a sample. Improve it in your own words if needed.

Before you send the mission, make sure Mission 1 is available in the working folder. The roadmap should build from the Social and SEO Strategy Plan, not from a generic idea of what AI can do.

Useful inputs:

- Locked business overview
- Standing instructions
- AI org chart from onboarding
- Social and SEO Strategy Plan
- 30-day social calendar
- Recommended AI content team
- Notes about email, CRM, communication, and memory needs

Figure: Mission 2 brief typed after Mission 1 was locked (real screen)

STEP 2: HANDLE THE RESPONSE

If It Asks Too Many Questions

OPTIONAL — PASTE THIS

Use your best judgment on the rest. Make reasonable assumptions, label them clearly,

and proceed with the roadmap.

If It Keeps Checking In

OPTIONAL — PASTE THIS

You are checking in too much. Act like my Chief of Staff. Complete the roadmap and bring it back when it is ready for review.

If It Just Does The Work

Let it work.

If It Recommends Too Many Tools

Say:

OPTIONAL — PASTE THIS

This is too tool-heavy. Rebuild the roadmap around business jobs first. Then recommend the minimum tools needed for the first 90 days.

STEP 3: REVIEW THE ROADMAP

Look for:

- Does the org chart make sense?
- Are the role recommendations practical?
- Is the priority order believable?
- Does it recommend too many tools too soon?
- Does it address communication and memory?
- Does it connect to the Social and SEO Strategy Plan?

The roadmap should not make you feel like you need ten new subscriptions tomorrow. It should clarify the next few AI employees and the order to build them.

STEP 4: CORRECT THE DRAFT

Examples — use any that match what you saw in Step 3:

OPTIONAL — PASTE THIS

This recommends too many hires at once. Rebuild the roadmap around the first three AI employees only.

OPTIONAL — PASTE THIS

The Comms Officer recommendation is too vague. Define exactly what email and CRM summaries it should produce.

OPTIONAL — PASTE THIS

The memory layer is missing. Add a simple shared-memory recommendation so these AI employees do not become disconnected chats.

STEP 5: LOCK THE ROADMAP

When useful, say:

ASK YOUR AI

This AI Employee Roadmap is locked. Treat it as our standing roadmap for the next AI systems we should build.

If the mission gets long and the employee starts forgetting earlier decisions, create a handoff:

OPTIONAL – PASTE THIS

Summarize what we have decided so far in 10 bullets. Include the recommended AI employees, priority order, tools, memory layer, open decisions, and what still needs review. Save it as mission-2-handoff.md in the roadmap folder.

Then start a fresh chat in the same working folder:

OPTIONAL – PASTE THIS

We are continuing Mission 2. Read mission-2-handoff.md and continue from where we left off. Do not redo completed work.

Chief of Staff Riley / Set up AI Chief of Staff for insurance agency

employee would do, what tools or data each would need, and how they should coordinate. Include recommendations for content production, SEO research, email review, CRM review, operations coordination, and shared memory. If you need one or two answers that would materially change the recommendation, ask now. Otherwise, make reasonable assumptions, label them, and proceed until you have a roadmap I can review.

Mission 2 accepted. I have enough from the locked business context and the Mission 1 plan to proceed without blocking. Drafting all six files now.

Ran 2 commands, created 6 files

Mission 2 complete. All six files in `02-ai-employee-roadmap/`.

What's in the pack

File	Headline
<code>roadmap-summary.md</code>	Thesis, today-vs-day-90, 4 hiring waves, ~\$175-345/mo budget, 6 labeled assumptions
<code>ai-org-chart.md</code>	12 roles in 3 divisions (Growth / Service / Memory & Reporting), reporting lines, weekly choreography
<code>next-hires-priority.md</code>	4 waves with success tests; what we're <i>not</i> hiring and why
<code>systems-and-tools.md</code>	Per-role tools, data sources, access; spend by tier; gap list (carrier appointments, AMS clarity, reviews export, compliance contact)
<code>shared-memory-and-communication.md</code>	The 4 memory layers, folder structure, handoff protocol, Riley's session-open and session-close routines
<code>90-day-build-plan.md</code>	Week-by-week build, milestones, 7 decision points for you, risk register, day-91 fork

The shape, in one picture

Phillip → Riley (Chief of Staff)

GROWTH
(SEO, Content, Niche×4, Reels)

SERVICE
(CRM, Customer Success, Sales Follow-up, Operations)

MEMORY & REPORTING
(Memory Librarian, Reporting Analyst, Communications, Compliance ☺)

Hiring waves at a glance

AI Employee Roadmap — Done For You Insurance Services

Mission 2 deliverable. Draft v0.1 by Riley, 2026-05-04. Built on the locked business overview, standing instructions, and Mission 1 strategy plan.

The thesis in one paragraph

DFY does not need a giant AI team. It needs a small, well-coordinated one with shared memory and explicit handoffs. The mistake most operators make is opening 12 ChatGPT tabs and calling it an AI team. That is parallel labor, not a team. The team becomes a team when (a) every sub-role reads the same locked context, (b) every output lands in a named folder so the next sub-role can pick it up, and (c) one Chief of Staff (Riley) assembles the artifact and brings it to Phillip. This roadmap stages 12 AI roles across 3 divisions, hires them in 4 waves over 90 days, and standardizes how they share memory so the team compounds rather than re-explains itself every Monday.

What changes in 90 days

Today	Day 90
Riley + 6 ad-hoc sub-roles run Mission 1 weekly	12 sub-roles run a content + service + memory engine

Figure: roadmap-summary.md — the big-picture payoff doc (real screen)

AI Org Chart — DFY Insurance, 90-day Target State

12 AI roles. 3 divisions. One Chief of Staff (Riley) coordinating. This is the day-90 picture. Hiring waves are in `next-hires-priority.md`.

The chart

Figure: `ai-org-chart.md` — your AI team rendered (real screen)

RESOURCEFULNESS PROMPT

Use this if the roadmap is vague, too complex, or locked into one vendor:

IF STUCK — PASTE THIS

I am in Module 6. You are building my AI Employee Roadmap. The issue is: [too many roles, vague roles, missing memory, missing email or CRM, too many tools, vendor lock-in]. Diagnose whether this is a prioritization issue, context issue, tool-bias issue, or missing-constraint issue. Ask me one question at a time. Then revise the roadmap around the first practical next steps.

If you explore a new AI work surface after this course, keep the structure separate from the vendor:

OPTIONAL — PASTE THIS

Translate this roadmap into a vendor-portable structure. Separate what belongs in folders, context, standing instructions, mission briefs, shared memory, and tool connectors.

COMMON FAILURE POINTS

- The roadmap recommends too many AI employees at once.
- Roles sound impressive but do not define inputs and outputs.
- The roadmap ignores email, CRM, communication, or shared memory.
- It recommends tools before defining the business job.
- It locks the business into one AI vendor.
- Long-session context drift causes the roadmap to contradict Mission 1.

OPTIONAL TOOL-SWITCHING NOTES

If you test Codex, OpenAI tools, or another AI workspace later, do not Google randomly and follow the first result. Product names change and search results mix desktop apps, command-line tools, and ChatGPT features.

Ask your Chief of Staff:

OPTIONAL — PASTE THIS

I want to test this roadmap in another AI work surface. Research the current official setup path, tell me which product is the desktop app versus developer CLI, and warn me about account, permission, and approval settings before I install anything.

DONE CHECKLIST

- ☐ Mission 2 brief given
- ☐ Roadmap received
- ☐ AI org chart reviewed
- ☐ Next-hire priority reviewed
- ☐ Communication and memory reviewed
- ☐ Tool recommendations reviewed
- ☐ Roadmap corrected if needed
- ☐ Roadmap locked

COURSE COMPLETION

You now have:

- AI Chief of Staff
- Working folder
- Business context
- Standing instructions
- AI org chart
- Training pattern
- Social and SEO Strategy Plan
- AI Employee Roadmap

That is your foundation.

The next step is building the systems the roadmap recommends.

Power-ups (Bonus)

Telegram, memory, CRM, Codex, orchestration, GSD/superpowers. Pick one. Ship one.

MODULE 7 · POWER-UPS (BONUS)

MODULE MAP

YOU START WITH

A working AI Chief of Staff and a clear roadmap, ready for upgrades.

YOU FINISH WITH

One new capability wired in: messaging, memory, CRM, Codex CLI, multi-agent orchestration, or GSD/superpowers.

MILESTONE

You messaged Riley from your phone, or Riley summarized the CRM, or two AIs read the same memory.

HOW TO WORK THIS MODULE WITH YOUR CHIEF OF STAFF

This module is a menu, not a march. Pick the sub-section that matches the next blocker on your Module 6 roadmap. Skip the others. Come back to them later as your roadmap surfaces new needs.

Each sub-section has the same three pages:

- › **Why** — what this upgrade unlocks, and an "is this for you?" question to decide.
- › **How** — the install path with the Ask Your AI prompt that bootstraps it.
- › **Verify** — the "you know it worked when..." check.

Do not install more than one upgrade per session. One upgrade, one verification, one piece of real work, then stop.

7.1 TELEGRAM — TWO-WAY CONVERSATION

Why

Today, talking to Riley means opening Claude Desktop. That is fine at your desk. It is bad at 9pm in the kitchen, on the road, or when an idea hits during a workout.

A Telegram bot lets you message Riley from anywhere, including voice memos. Riley wakes up on your laptop on Monday and uses what you sent on Sunday.

Is this for you?

- Do you regularly think about your business outside working hours? → Yes.
- Do you want to capture voice memos and have them turn into real work? → Yes.
- Are you comfortable installing a Telegram bot once? → Yes.

If three yeses, install 7.1 first. If you said no to the third, ask Riley to walk you through it; it is a 10-minute setup.

How

ASK YOUR AI

I want to set up two-way Telegram messaging so I can text and send voice memos to you from my phone. Walk me through:

1. Creating a Telegram bot via BotFather and getting the bot token.
2. Where to store the token safely on this machine (keychain or an env file outside the working folder).
3. The smallest possible script that lets me message the bot from my phone and have you read the messages on my laptop.
4. Where the messages should land in my working folder so you can pick them up next time we work together.

Ask me one question at a time. Do not move forward until I confirm.

IF STUCK BotFather did not give a token

Open Telegram, search for @BotFather, send /newbot, follow the prompts. The token is the long 123456:ABC... string. If you closed the chat without copying it, send /mybots to BotFather and pull it again. Never paste the token into a chat outside Telegram.

If Curious — webhook vs polling.

Riley will probably default to a polling script (Riley wakes up, asks Telegram "anything new?", processes messages). Webhooks are faster but require a public URL. Polling is fine for personal use; webhooks are an upgrade for later.

Verify

You know it worked when:

- You sent a message from your phone to your bot.
- Riley reads that message on your laptop and references its content in a reply or in a working-folder file.
- You can repeat the loop without re-doing setup.

IF STUCK Riley says it can read messages but can't show one

Ask Riley to open the file where messages are stored and quote three exact words you sent. If it cannot, the polling step is broken and the rest is theater. Restart from step 3 of the install prompt.

7.2 SHARED MEMORY — CONTEXT THAT SURVIVES SESSIONS

Why

Module 3 locked your business context into CLAUDE.md and AGENTS.md. That context lives in one folder. Module 6 will tell you to hire more AI employees — and each employee is in a different folder, sometimes a different vendor.

Shared memory means **multiple AI employees read the same locked context across sessions and across vendors**, without you re-onboarding each one.

There are two layers:

- **Markdown memory** — a `memory/` folder of dated decisions, lessons, and references. Plain files. Every employee can read them.
- **Vector memory** — a Mem0 (or equivalent) backend that lets employees search prior decisions semantically. Heavier setup; only worth it once you have multiple employees doing related work.

Start with markdown memory. Layer Mem0 only when you actually need search.

Is this for you?

- Are you about to hire your second AI employee from the Module 6 roadmap? → Yes.
- Do you find yourself re-explaining decisions across chats? → Yes.

How

ASK YOUR AI

I want to set up shared memory so my next AI employee starts with the context I already locked in this folder.

Step 1: Create a `memory/` folder in this working folder.

Step 2: Draft three starter files: `decisions.md`, `references.md`, and `people.md`. Pull what you already know from `CLAUDE.md` and `AGENTS.md`. Use dated entries (YYYY-MM-DD) for everything.

Step 3: Show me the three files and explain the rules for what belongs in each. Wait for my approval before locking.

Step 4: Tell me how the next AI employee I hire should be pointed at this `memory/` folder so it inherits this context.

Ask me one question at a time.

OPTIONAL when to add Mem0 or a vector DB

Add it when (a) you have three or more AI employees and (b) you find them missing relevant prior decisions. Until then, plain markdown plus a good index file beats a vector store you don't know how to query.

Verify

You know it worked when:

- A fresh chat in a brand-new folder, pointed at this `memory/`, can answer "what did I decide about X" with the right answer and the right date.
- The next employee you hire reads `memory/decisions.md` first thing and references at least one entry without you mentioning it.

IF STUCK the new chat can't find the memory

The most common cause is that the new chat is in a different folder and is not configured to read the original folder's `memory/`. Either move the new employee's folder so it nests inside the original, or add a `memory_paths` line to its `AGENTS.md`. Riley can do this for you in one prompt.

7.3 CRM CONNECTOR — YOUR PIPELINE, SUMMARIZED

Why

The Communication AI employee from your Mission 2 roadmap should be reading your CRM, not asking you. Whether you run GoHighLevel, HubSpot, AgencyZoom, Salesforce, or your AMS, the pattern is the same: a read connector that pulls the data your employee needs and writes a daily or weekly summary into your working folder.

Start with read access only. Write access (creating leads, sending campaigns) comes after you trust the connector.

Is this for you?

- Do you log in to your CRM every morning to "see what happened"? → Yes.
- Would you rather start your day with a one-page summary in your working folder? → Yes.
- Does your CRM have an API or export option? → Almost always yes.

How

ASK YOUR AI

I want a read-only connector between my CRM and this working folder.
The CRM is [GoHighLevel / HubSpot / AgencyZoom / Salesforce / etc.].

Step 1: Confirm which API or export method this CRM supports.
Step 2: Walk me through getting an API key with read-only scope.
Do not write code yet.
Step 3: Tell me where to store the key (keychain, env file outside the working folder, never in the repo).
Step 4: Draft the smallest possible script that pulls last week's new leads, opportunities, and revenue into a single file in pipeline/weekly-summary.md.
Step 5: Schedule it to run every Monday at 6am local.
Ask me one question at a time. Do not move past any step until I confirm what I see on my screen.

IF STUCK your CRM has no API

Almost every CRM exports CSV. Have Riley write a script that watches a Downloads folder for the weekly export and processes it. Less elegant, just as useful.

If Curious — write access for outbound.

Once the read connector has produced four good summaries in a row, ask Riley to scope a write path for one specific use case (e.g. logging a call note, tagging a lead). Add one write per quarter, not all at once.

Verify

You know it worked when:

- pipeline/weekly-summary.md exists with last week's data.
- Riley can answer "how did last week's pipeline change" with numbers, not vibes.

- The summary appears on Monday morning without you triggering it.

7.4 CODEX CLI — ADD A POWER-USER TEAMMATE

Why

Codex is OpenAI's coding agent. It runs in your terminal, reads the same `AGENTS.md` Riley reads, and is faster for certain power-user moves: long file refactors, batch script generation, system tasks that don't need conversation.

You don't replace Riley with Codex. You add Codex as a second employee that happens to live in the terminal. Both read the same operating folder.

Is this for you?

- Do you ever wish Riley would "just do it" without narrating every step? → Yes.
- Are you comfortable opening Terminal once a week? → Yes.
- Do you have a real ChatGPT account? → Required.

How

ASK YOUR AI

I want to add Codex CLI as a second AI employee that reads the same `AGENTS.md` you read.

Step 1: Walk me through installing Codex CLI on this Mac/Windows machine. Use the consumer install path, not enterprise.

Step 2: Authenticate Codex with my ChatGPT account.

Step 3: Run a tiny test command from inside this folder to confirm Codex can see `AGENTS.md` and respect it.

Step 4: Show me one example task I should give to Codex instead of you, and one task I should keep with you.

Ask me one question at a time.

IF STUCK Codex says "no AGENTS.md found."

You are running Codex from a folder that is not the working folder. `cd` into the working folder first, or pass the folder path as an argument. Do not duplicate `AGENTS.md` into a sub-folder — that creates two sources of truth and they will drift.

Verify

You know it worked when:

- Codex, run from your working folder, references your business by name without you re-onboarding it.
- You completed one real task with Codex (not a demo task) and reviewed the result.
- You can describe in one sentence which work goes to Riley and which goes to Codex.

7.5 MULTI-AGENT ORCHESTRATION — WHEN YOU NEED MORE THAN ONE

Why

Module 6 left you with a roadmap of multiple AI roles. Eventually you will want them to coordinate without you in the middle.

Three common patterns, in increasing complexity:

Tool	Best for	Skip if
Working folder + memory	Two or three roles handing off via shared markdown files.	You want roles that talk in real time.
ChatGPT Agents / Tasks	Scheduled or event-driven runs of a single role with tools.	You don't need scheduled triggers yet.
Paperclip / CrewAI	Multi-role workflows with explicit role contracts and handoffs.	You haven't yet hit the wall with the simpler patterns.

Almost everyone should use the working folder pattern first. CrewAI and Paperclip are powerful but introduce framework complexity that you don't need until you have at least three coordinated roles doing real work.

Is this for you?

- Do you have three or more AI employees from Module 6 actively producing work? → Yes.
- Are you bottlenecked by manually shuttling files between them? → Yes.

How

This sub-section is intentionally lighter on a single install path. The right tool depends on what you actually need.

ASK YOUR AI

I have these AI roles from my Module 6 roadmap: [list them].
The current bottleneck is [describe the manual handoff].

Recommend the lightest tool that solves this:
– Working folder + memory + naming convention?
– ChatGPT Agents with a scheduled task?
– Paperclip or CrewAI for explicit role coordination?

For your recommendation, give me:
1. The one example workflow that proves it works.
2. The minimum setup to get there.
3. The first mistake people make and how to avoid it.

Ask me one question at a time.

OPTIONAL when to bring in a framework

The threshold is usually "I have three roles, two of them depend on the third's output, and I want this to run without me." Below that threshold, scheduled tasks plus shared memory beat any framework.

Verify

You know it worked when:

- One workflow that previously needed you in the middle now runs without you.
- The output lands in your working folder where the next role picks it up.
- You can describe the handoff in two sentences.

7.6 CLAUDE POWER-USER SKILLS — GSD AND SUPERPOWERS

Why

GSD ("Get Shit Done") and superpowers are Claude-specific skill packs that add planning discipline, atomic-commit execution, debugging methods, and skill chaining.

They are excellent. They were deliberately kept out of Modules 1-6 because the foundation should be portable across vendors. Inside Claude, once your foundation is locked, they earn their seat fast.

Is this for you?

- Are you doing real software work with Riley (not just docs and strategy)? → Yes.
- Do you want Riley to plan before executing, with explicit review checkpoints? → Yes.
- Are you comfortable being Claude-specific for this work? → Yes.

If you said no to the third question, skip 7.6. The portable working folder + memory pattern still serves you.

How

ASK YOUR AI

```
I'm in the Code work surface inside my locked working folder.
Walk me through enabling:
- GSD (Get Shit Done) for plan/execute discipline.
- superpowers for the brainstorming, debugging, and TDD skills.

For each:
1. Where it gets installed and how I confirm it's active.
2. The smallest example task that demonstrates it.
3. When NOT to use it (so I don't add discipline overhead to
   trivial tasks).
Ask me one question at a time.
```

IF STUCK Claude says GSD is not available

GSD is a plugin that needs to be enabled in Claude Code's plugin settings. Riley should be able to walk you through the enable step. If it can't, ask "is GSD currently enabled in this Claude installation? List the active plugins." Often the answer is "yes, here they are" and you were missing the slash-command shortcut.

If Curious — you only need this if...

You only need GSD when work is multi-step and you want the plan locked before execution starts. You only need superpowers when you want a curated set of disciplined workflows (TDD, brainstorming, code review). Both are productivity multipliers, not productivity prerequisites.

Verify

You know it worked when:

- You ran one `/gsd:plan-phase` (or equivalent) and got a plan you could approve before any code changed.
- You ran one superpowers skill (e.g. brainstorming or debugging) and it produced output that was clearly different from the default Claude response.
- You have a personal rule for when to invoke each.

7.7 PICK ONE — WHICH UPGRADE GIVES THE MOST LEVERAGE RIGHT NOW

This is the decision page. Use it before you install anything.

The Decision Worksheet

Open `06-mission-ai-employee-roadmap/01-roadmap-summary.md` from Module 6. Read the next AI role you planned to hire. Then answer:

Question	If yes, install
Is the next role about reaching you on the go or capturing thoughts?	7.1 Telegram
Is the next role about another employee inheriting your context?	7.2 Shared memory
Is the next role about pipeline, leads, or customers?	7.3 CRM connector
Is the next role a power-user that lives in the terminal?	7.4 Codex CLI
Are you bottlenecked by manual handoffs between roles?	7.5 Multi-agent
Are you doing real software work and want planning discipline?	7.6 GSD / superpowers

If you said yes to more than one, install the one that unblocks the next mission on your roadmap, not the one that sounds most exciting.

Cadence

One upgrade per quarter is fast. Two per quarter is aggressive. Three per quarter is how foundations break.

IF STUCK every option looks attractive

Re-read your Module 6 roadmap and ask Riley: "Given this roadmap and what we have already built, which one Module 7 upgrade gives the most leverage in the next 30 days?" If Riley names two, ask which it would do first and why. Pick that one.

Done Checklist For Module 7

- ☐ You picked one sub-section using the worksheet above.
- ☐ You installed it and verified it on real work.
- ☐ You wrote one paragraph in ``memory/decisions.md`` about why you chose it and what it unlocked.
- ☐ You know which sub-section you'd pick next, and what would have to be true to justify installing it.

NEXT

This is the end of the formal course. Riley should be doing real work for you weekly. Your roadmap should be moving.

If you ever feel stuck, return to your Module 6 roadmap, find the next bottleneck, and pick the matching Module 7 upgrade. The course is now a reference, not a march.

AIAI MASTERMIND · YOUR FIRST AI EMPLOYEE · OPERATING WALKTHROUGH

aiaimastermind.com · github.com/philgoodvibe/your-first-ai-employee

THE OPERATING PAGE

Keep this page open. Run your business from it.

This is the back-of-manual desk reference. After the course ends, this is the page you return to whenever you brief your Chief of Staff on real work.

WHAT YOU NOW OWN

ASSET	WHAT IT DOES	WHERE IT LIVES
AI Chief of Staff	The named employee that coordinates all work.	Claude Desktop · Code tab
Working folder	One place every artifact lives.	your-first-ai-employee/
Standing instructions	How the employee should work with you.	CLAUDE.md, AGENTS.md
Business overview	The shared understanding of your business.	context-folder/00-business-overview.md
Course skill	The reusable working pattern for missions.	skill/your-first-ai-employee.skill.md
Social and SEO Strategy	First locked deliverable. Drives content.	01-social-seo-strategy/
AI Employee Roadmap	The next 90 days, named and prioritized.	02-ai-employee-roadmap/

HOW TO DISPATCH YOUR CHIEF OF STAFF

- 1

OUTCOME

What you want produced.
- 2

CONTEXT

Where the source material lives.
- 3

WHY

The business reason it matters.
- 4

QUALITY BAR

What good looks like to you.
- 5

GUARDRAILS

What it must not do.
- 6

AUTONOMY

Clarify or proceed with labeled assumptions.

LOCK PHRASE

This version is locked. Treat it as our standing reference going forward. Update the relevant operating docs so future work uses this version.

WHEN THE AI GETS WEIRD

- ⚠️ TOO MANY QUESTIONS

Use your best judgment on the rest. Make reasonable assumptions, label them clearly, and proceed with the draft.
- ⚠️ TOO MANY CHECK-INS

You are checking in too much. Act like my Chief of Staff. Use the context you have, complete the draft, and bring it back when it is ready for review.
- ⚠️ OUTPUT READS GENERIC

This reads generic. Diagnose thin context, a missing standing instruction, or an unsupported assumption. Ask one question, then revise.

REFERENCE

Index and glossary.

Find any prompt, any artifact, any term in one place.

PROMPT INDEX

PROMPT	PAGE
Pre-flight readiness check	03
Confirm the hire (Module 1)	04
Verify folder structure (Module 2)	05
Onboarding briefing (Module 3)	06
Lock standing documents (Module 3)	07
New-chat test (Module 3)	07
Skill verification (Module 4)	08
Mission 1 lock prompt (Module 5)	11
Mission 2 briefing (Module 6)	12
Lock phrase (Operating page)	14
Recovery: too many questions	14
Recovery: too many check-ins	14
Recovery: output reads generic	14

GLOSSARY

Chief of Staff · your AI employee. Coordinates work, holds context, executes briefs.

Working folder · the one folder where every artifact lives. Portable across tools.

Context folder · a drop zone for raw business material. The AI organizes it.

Standing instructions · CLAUDE.md and AGENTS.md. How your employee should work with you. Read every session.

Brief · the six-layer mission front-load (Outcome / Context / Why / Quality bar / Guardrails / Autonomy). Replaces clever prompts.

Lock · the act of declaring a draft the standing reference. Future work uses the locked version.

Mission · a real piece of business work briefed end-to-end. The course ships two: Social and SEO Strategy, and the AI Employee Roadmap.

AI org chart · the team of future AI employees the Chief of Staff can coordinate.

Skill · a reusable working pattern your Chief of Staff applies to a class of work.

New-chat test · opening a fresh chat in the same folder to confirm context survives without prompting.

Volatile facts (current pricing, UI names, vendor access rules) live in the companion repo's troubleshooting page, not in this manual. Check there first when something on screen does not match this book.

REFERENCE · CONTINUED

Technical glossary.

Terms Claude, Codex, and other AI tools throw around. Each one mapped to the hiring analogy so they stop sounding intimidating. Skim this page once, then return when something on screen does not make sense.

WHERE THE WORK LIVES

Repo (repository) · A labeled filing cabinet for one project. Holds every version of every file. The course library is one repo. Your working folder is your local copy of it.

GitHub · The cloud warehouse where repos live. You connected it in Module 1 so your Chief of Staff could fetch the cabinet.

Clone · Fetch · Making a working copy of the cabinet for your office. Module 2 cloned the course repo into your working folder.

Branch · A separate workspace inside the same project. Lets one person experiment without disturbing the main version.

Commit · A saved snapshot of changes, with a one-line note. An entry in your assistant's daily logbook.

Pull request (PR) · A draft set of changes submitted for review before being filed in the main version. The professional version of "draft, review, lock."

Issue · A help-desk ticket inside the repo. Describes a problem to track or a job to do.

Path · A file's address, e.g. `skill/your-first-ai-employee.skill.md`. Absolute paths are the full mailing address; relative paths are just the room number.

Markdown (.md) · A plain-text writing format anyone (and any AI) can read and write. Your operating docs, the skill, and your workbook entries are all markdown.

HOW AI TOOLS TALK

Model · The version of AI you've hired. "Claude Opus 4.7" and a Codex model are different employees from different agencies — different specialties, different rates.

Prompt · Anything you type to the AI. The course teaches "brief" — a structured prompt — instead of clever one-liners.

Context window · The size of your employee's desk. Only so much paperwork fits at once. Long sessions push older paperwork off the desk; that is why mission walkthroughs include a handoff prompt.

Token · The unit the model reads and writes in. Roughly three-quarters of a word. Usage and context windows are measured in tokens.

Session · A single chat instance. like a single meeting.

TOOLS AND SURFACES

CLI (command-line interface) · A text-driven way to use software instead of buttons and menus. You type a command; the tool runs.

Terminal · Shell · Bash · The window where you type CLI commands. "Bash" is the most common shell on Mac. If a tool says "open your terminal," this is it.

Claude Code · The Claude work surface used in this course — the one with a folder linked. Different from "Chat" (no folder) and "Cowork" (a different pairing experience).

Codex · OpenAI's coding-aware assistant. Module 7 introduces it as a power-up. Reads the same `AGENTS.md` standing instructions Riley reads.

Connector · A Claude integration with an outside service (GitHub, Google Drive, Notion). You authorize each one once. Like issuing a vendor a building keycard.

API · "Application Programming Interface." The service-desk window software uses to talk to other software. When a tool asks for an API key, it is asking for the keycard.

API key · Token (credential) · A long random string that proves a request is yours. Treat it like a password. Never paste one into a public chat.

MCP (Model Context Protocol) · A standardized headset that lets AI tools plug into outside services in a consistent way. An MCP server is one such plug-in service.

Plugin · An add-on that extends a tool's capabilities. Module 7 covers Claude Code plugins (Telegram, CRM, memory) as bonus power-ups.

Agent · An AI configured to take a sequence of actions on its own. Riley is an agent. So is anything that uses tools without being walked through every step.

Skill · A reusable working pattern your AI employee applies — usually a markdown file. The course skill is the canonical example.

PERMISSIONS, MONEY, AND LIMITS

Permissions · What an app is allowed to read, write, or run. Your Mac asks before granting them. Module 2 walks through approving the working folder

AIAI MASTERMIND

END OF MANUAL

Now run the business.

Your AI Chief of Staff is hired, onboarded, trained, and dispatched. The Operating Page is the only page you need open to do the next thing.
